

# The TELESTO trial is looking at treatment for Iron Overload in MDS patients

**Purpose of study:** This trial will investigate how exactly chelation therapy can affect the health of patients with MDS and iron overload

**If you meet the following criteria you may be eligible for the study:**

- Do you have myelodysplastic syndrome (MDS) and iron overload due to blood transfusions ?
- Have been told that your MDS is low, or low to moderate risk of turning into leukaemia?
- Are you aged over 18 ?
- Are you willing to participate in a research study for a duration period of 3 to 5 years ?
